KATALOG 2019. / 2020.

SADRŽAJ

LED žarulje	04 - 09
LED paneli	10 - 21
Okviri za LED panele	22 - 23
LED plafonjere	24 - 27
LED downlight svjetiljke	28 - 55
Rozetne	56 - 59
LED šinska rasvjeta	60 - 75
LED magnetna tračna rasvjeta	76 - 89
LED linearna rasvjeta	90 - 95
LED reflektori	96 - 105
LED cijevi	106 - 109
Tračne svjetiljke	110 - 111
Vodotijesna rasvjetna tijela	112 - 113
LED svjetiljke za nužnu rasvjetu	114 - 117
LED industrijska rasvjeta	118 - 127
LED ulična rasvjeta	128 - 137
LED moduli	138 - 141
LED trake	142 - 147
Aluminijski profili	148 - 153
LED neonflex	154 - 155
LED napajanja	156 - 157
Zidna rasvjeta	158 - 179
Vrtna rasvjeta	180 - 191
Infracrveni senzori pokreta	192 - 195

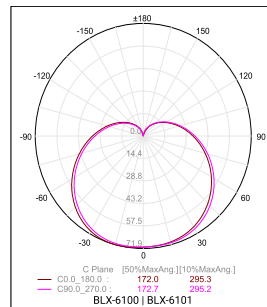

LED ŽARULJE

Svjetlost LED žarulja uljepšat će Vaš interijer i oživjeti boje.
Iako su tradicionalnog prepoznatljivog oblika,
naše LED žarulje razlikuju se po naprednoj LED tehnologiji koja se u njima nalazi.
Ne samo da će boje ostati vjerne,
nego će i svjetlosni tok ostati stabilan tijekom cijelog trajanja LED žarulje.

LED PANELI

LED paneli, karakteristični po homogenom izvoru svjetlosti, su iznimno atraktivne svjetiljke koje se odlično uklapaju u uređenje svakog doma ili poslovnog prostora. Prostori osvijetljeni LED panelima su ugodni za oko jer izvor svjetlosti nije agresivan za vid.

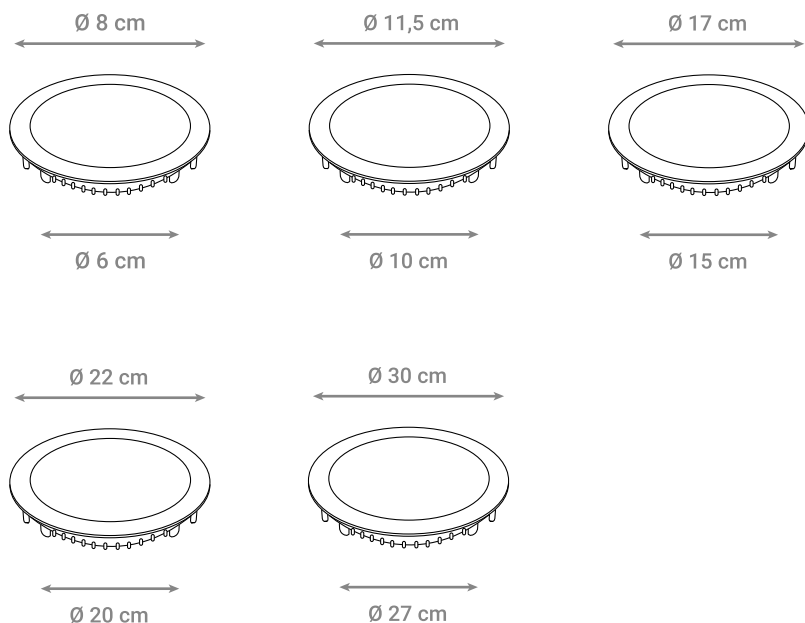

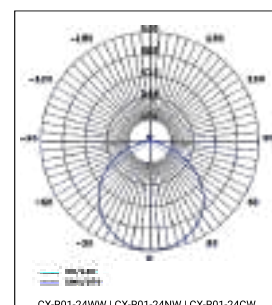

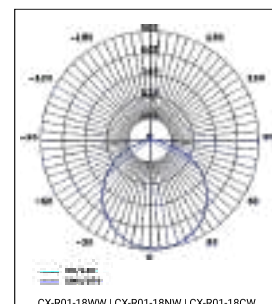

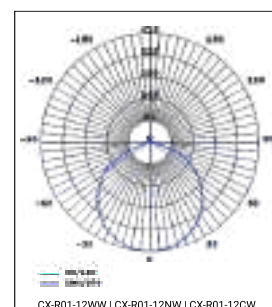

U ponudi imamo modele namijenjene ugradnoj i nadgradnoj montaži. Zajedničko obilježje svih LED panela Green Tech je visok RA faktor, visoka lumenaža, vijek trajanja od 30000 radnih sati i, najvažnije od svega, izoliran driver koji omogućuje perfektan rad svjetiljke pri naponu od 175 - 265 V.

OKVIRI ZA LED PANELE

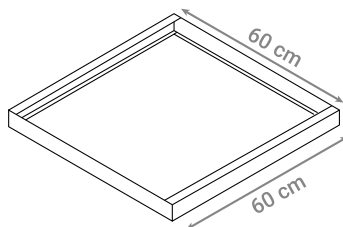

U prostorima koji otežavaju ugradnju LED panela zbog materijala od kojih je načinjen strop (beton i slično), idealno rješenje je nadgradna montaža. Nadgradna montaža LED panela je moguća pomoću montažnih okvira.

Okviri su dostupni u dvije različite dimenzije, a izrađeni su od aluminija koji je obojen bijelom bojom.

LED PLAFONJERE

LED plafonjere su sve popularnije kao dekorativni rasvjetni elementi, a dostupne su u raznim oblicima i veličinama. Najčešće su glavni izvor svjetlosti u domovima koje pretvaraju u živopisan prostor s ugodnim ambijentom.

LED DOWNLIGHT SVJETILJKE

LED downlight svjetiljke u svom osnovnom obliku usmjeravaju svjetlosni tok okomito prema dolje. Mogu se ugraditi u strop, pa tada govorimo o ugradnim LED downlight svjetiljkama. Svjetiljke se montiraju nadgradno na strop ili kao svjetiljke visilice u prostorima koji otežavaju ugradnju zbog materijala od kojih je načinjen strop (beton i slično).

ROZETNE

Za razliku od klasičnih LED downlight svjetiljki koje se koriste uglavnom za osvjetljenje poslovnih prostora ili ureda, rozetne imaju široku primjenu i u osvjetljenju stambenih prostora. Zahvaljujući kompaktnom dizajnu pružaju maksimalnu fleksibilnost koja je potrebna za ugradnju s LED žaruljama.

LED ŠINSKA RASVJETA

LED šinska rasvjeta koristi se za komercijalne, industrijske i rezidencijalne potrebe.

Široku primjenu nalazi u velikim otvorenim trgovinama i supermarketima u kojima može omogućiti vrhunsku osvjetljenost u svim pravcima.

LED šinska rasvjeta pokriva širok spektar proizvoda, usluga i aktivnosti na radnom mjestu i prodajnim prostorima.

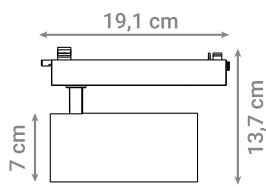

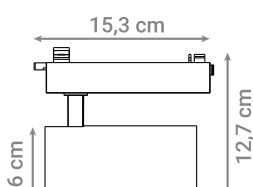

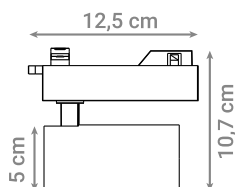

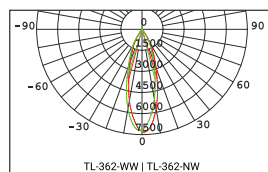

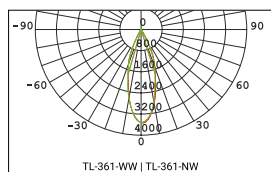

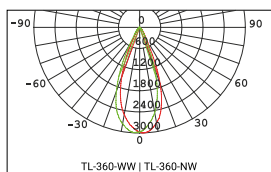

Iz ponude izdvajamo LED šinske svjetiljke sa širokim, užim ili naglašeno užim snopom rasipanja svjetla.

LED MAGNETNA TRAČNA RASVJETA

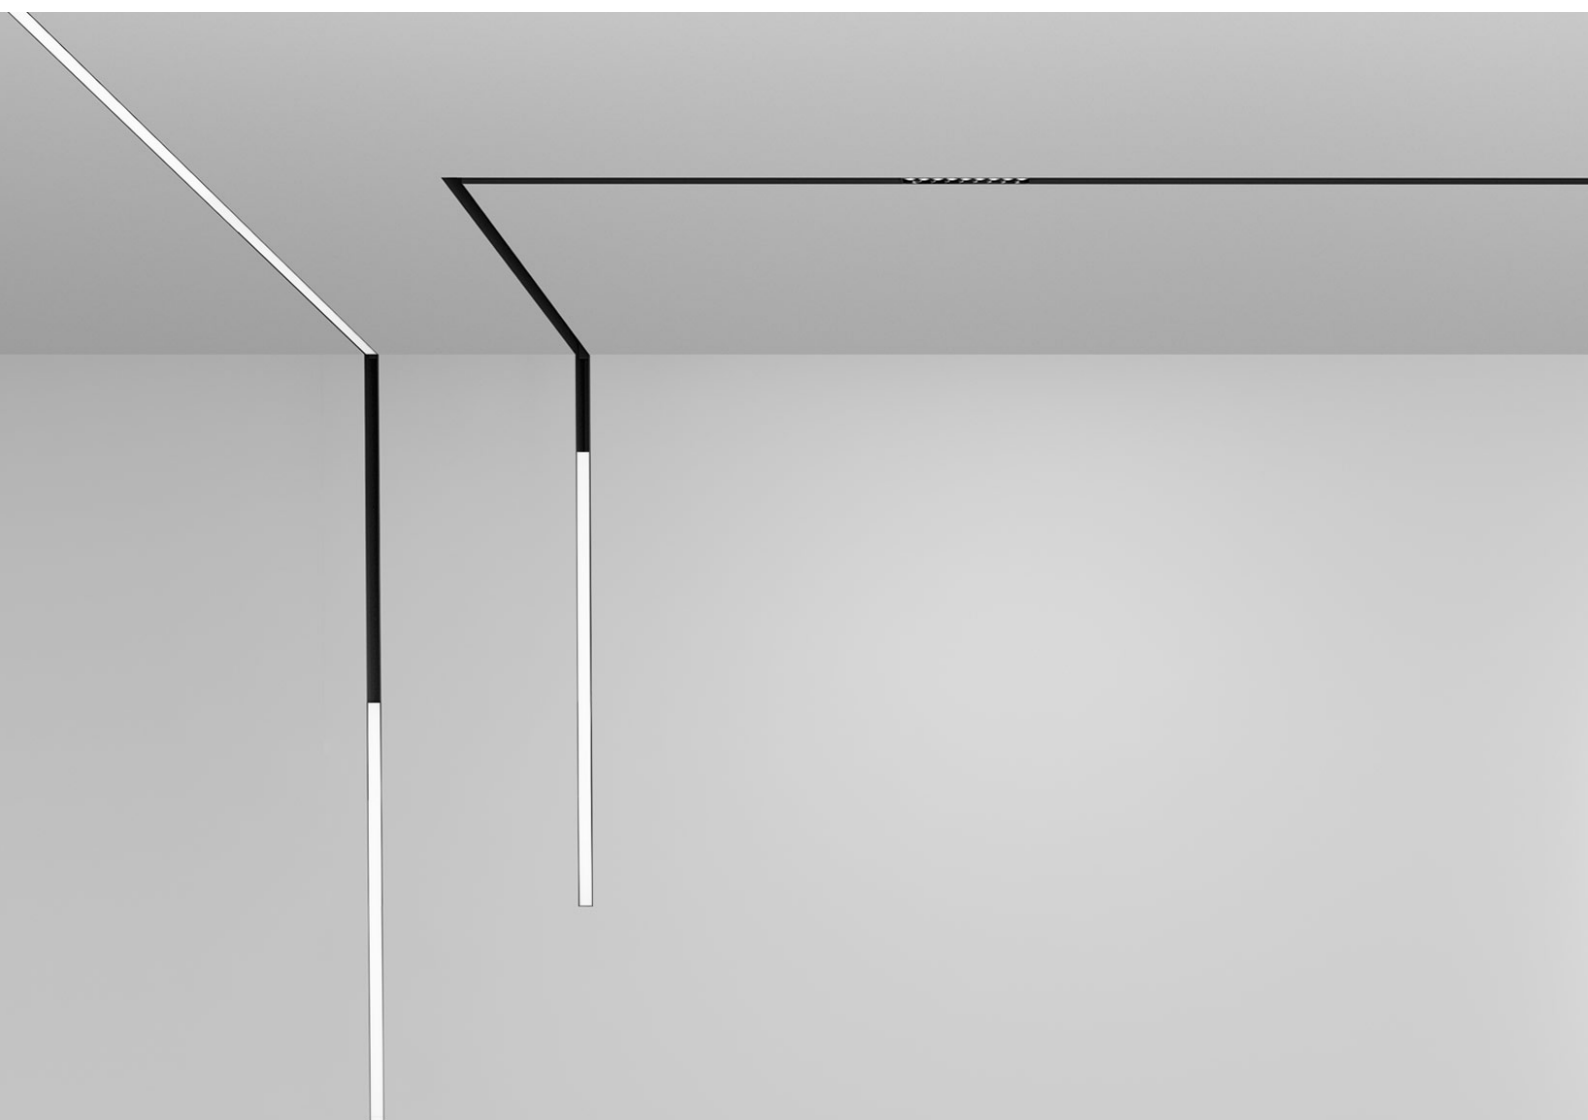

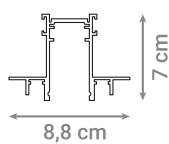

Sustav rasvjete koji se bazira na magnetnim kompaktnim šinama omogućuje fleksibilno prilagođavanje položaja izvora LED svjetlosti. LED svjetiljke se jednostavno montiraju i uklanjaju duž magnetnih šina pomoću posebnih sigurnosnih zakački.

Pomoću različitih spojnih i kutnih elemenata moguće je oblikovati bilo koju duljinu i oblik magnetnog sustava LED rasvjete.

LED LINEARNA RASVJETA

LED linearna rasvjeta je posebno pogodna za uredske prostore, trgovačke centre, proizvodne pogone i ostala mjesta gdje standardi rasvjete moraju biti na najvišoj mogućoj razini.

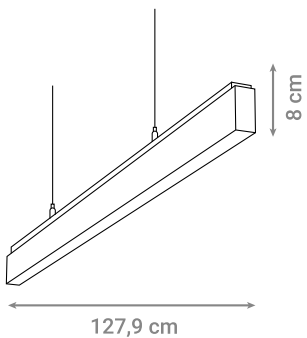

U uredima najčešće zamjenjuje viseće armature s fluo cijevima iznad radnih stolova no zbog raznih mogućnosti izvedbe primjena LED linearne rasvjete daleko je svestranija. Simetrična raspodjela svjetla je potrebna u prostorima koji zahtijevaju homogeno osvjetljenje.

Kut rasvjete je simetričan u odnosu na liniju izvedbe rasvjete npr. duž prostora neke proizvodne linije u tvornici. Asimetrična LED linearna rasvjeta omogućuje naglašavanje određene rasvjetne zone npr. lijevo ili desno od linije LED rasvjete.

LED REFLEKTORI

LED reflektori namijenjeni su za osvjetljavanje igrališta, skladišta, terena ili dvorišta, za unutarnju ili vanjsku uporabu.

Njihovo se svjetlo raspršuje pod veoma velikim kutem, čineći ih iznimno efikasnim načinom rasvjete.

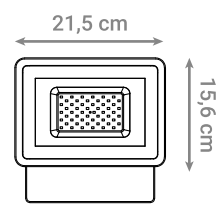

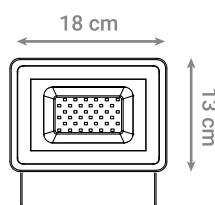

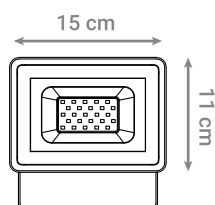

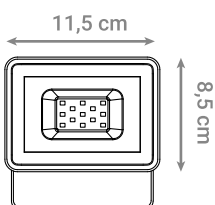

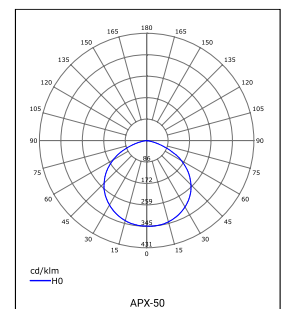

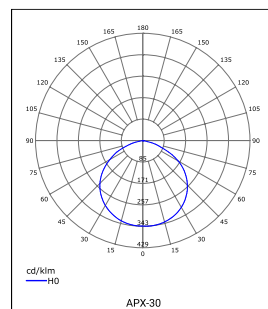

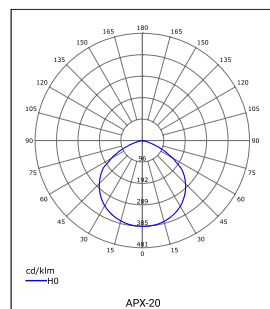

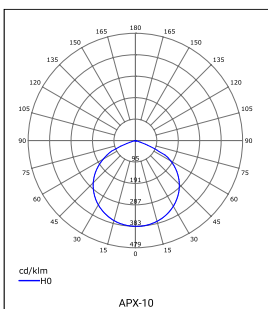

Ne trepere, nisu štetni za vid korisnika, imaju dug vijek trajanja te ih se može koristiti po svim vremenskim uvjetima.

LED CIJEVI

LED cijevi troše manje električne energije, daju jasniju svjetlost i imaju duži vijek trajanja u odnosu na fluo cijevi. Završni pinovi na LED cijevima omogućuju ugradnju u sve vrste armatura i rastera. Koriste se u uredima, skladištima, na prodajnim mjestima, halama, zdravstvenim ustanovama i ostalim prostorima.

TRAČNE SVJETILJKE

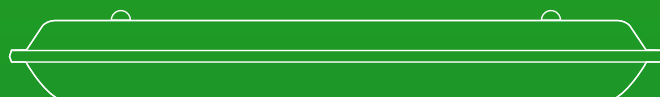

Tračne svjetiljke primjenu najčešće pronalaze u garažama i skladištima.
Tračne svjetiljke namijenjene su montaži isključivo sa LED cijevima T8.
Zbog niskog stupnja IP zaštite nisu pogodne za ugradnju u vlažne prostore.

LED SVJETILJKE ZA NUŽNU RASVJETU

LED svjetiljke za nužnu rasvjetu namijenjene su za nužnu ili opću rasvjetu prostora. Glavne funkcije sustava rasvjete u nuždi su omogućiti ljudima siguran izlaz iz problematičnih zona, pružanje dovoljno rasvjete uzduž puteva za evakuaciju tako da osobe sigurno mogu pronaći put do izlaza za vrijeme ispada mrežnog napona ili u slučaju prirodnih katastrofa (požari, potresi i slično). LED svjetiljke za nužnu rasvjetu se automatski aktiviraju prilikom svakog prekida rada električne mreže, a pogonjene su baterijski.

LED INDUSTRIJSKA RASVJETA

LED industrijska rasvjeta obično osvjetljava velike prostore u kojima borave ljudi i pri tome troši mnogo energije pa je stoga logično da joj posvetimo pojačanu pažnju. Moderna LED industrijska rasvjeta može poboljšati vizualni osjet radnog okoliša i istodobno povisiti produktivnost uz povećanu sigurnost na radu.

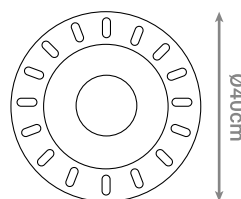

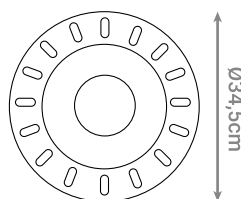

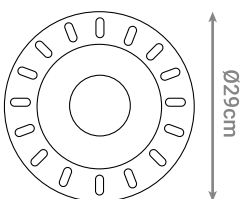

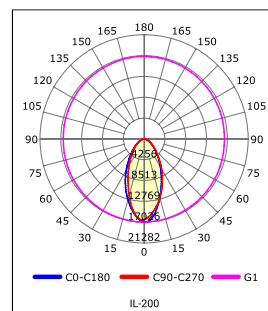

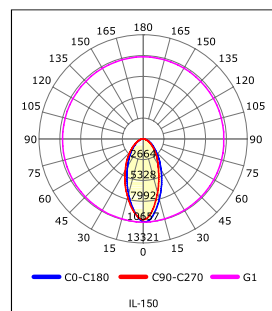

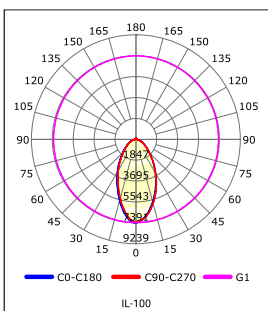

Green Tech LED industrijska rasvjeta je posebnu pažnju posvetila izbjegavanju direktnog i indirektnog blještanja te kvalitetnoj reprodukciji boje predmeta.

LED ULIČNA RASVJETA

LED ulična rasvjeta koristi se za osvjetljenje svih vrsta javnih puteva, ulica, parkova, parkinga, urbanih centara i ostalih vanjskih prostora.

Niz je prednosti LED ulične rasvjete. Ona promiče sigurnost u urbanim područjima i povećava kvalitetu života umjetnim produljenjem vremena osvjetljenja tako da se aktivnosti produžuju. LED ulična rasvjeta poboljšava sigurnost za vozače i pješake.

LED MODULI

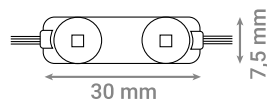

LED moduli omogućuju veoma veliku osvjetljenost uz malu potrošnju i minimalno zagrijavanje. Savitljivi kablovi za povezivanje LED modula omogućuju jednostavnu i raznoliku konfiguraciju elemenata.

Najčešće se koriste kao pozadinsko osvjetljenje reklamnih panoa, 3D reklama, namještaja, zidova, stepeništa, plakara, kuhinja i kupaonica. Pouzdani su za uporabu u prostorima sa povišenom vlažnošću.

LED TRAKE

LED traka je zapravo fleksibilna traka s LED diodama koju možete montirati gotovo bilo gdje i tako stvoriti ugodan ambijent u prostoru.

U našoj ponudi pronaći ćete modele sa 3014, 3528 i 5050 LED čipom. Četiri znamenke predstavljaju veličinu LED čipova u milimetrima, primjerice dimenzije LED čipa 3528 su 3,5 mm * 2,8 mm.

ALUMINIJSKI PROFILI

Aluminijski profili pronalaze višenamjensku primjenu u poslovnim i stambenim prostorima. Ugradnjom LED trake u aluminijske profile postiže se izrazito moderan i funkcionalan svjetlosni efekt. U našoj ponudi pronaći ćete modele namijenjene ugradnoj i nadgradnoj montaži.

LED NEONFLEX

LED neonflex je fleksibilan i vrlo izdržljiv rasvjetni proizvod. Primjena uključuje rasvjetu u prodavaonicama, izradu svijetlećih znakova, osvijetljavanje zgrada ili jednostavnu rasvjetu vrta. Difuzni i kontinuirani svjetlosni efekt LED neonflex-a stvorit će ugodan ambijent u svakom prostoru.

LED NAPA JANJA

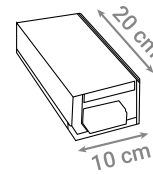

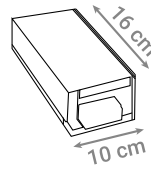

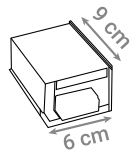

LED napajanja su elektronički sklopovi koji smanjuju i ispravljaju izmjenični napon (AC) na istosmjerni napon (DC) potreban za pogon izvora LED svjetlosti. Najčešće se koriste za napajanje LED modula, LED trake i LED neonflex-a.

Pri izboru naponskog izvora za napajanje, osim iznosa konstantnog napona, bitno je odrediti i snagu izvora. Snaga izvora određuje koliko se slogova LED elemenata smije priključiti na izvor, a da izvor pri tome ne bude preopterećen. Preopterećeni izvor bi isključio napon za napajanje i svjetla jednostavno ne bi bilo.

LED NAPA JANJE

ZIDNA RASVJETA

Zidna rasvjeta je prvenstveno namijenjena za ambijentalno osvjetljenje, ali se može koristiti i kao svjetlost za čitanje ili kao glavno osvjetljenje u ovisnosti od tipa i položaja svjetiljke u prostoru. Zidna rasvjeta prikladna je za unutarnju i vanjsku uporabu. Prednost zidne rasvjete u odnosu na stropnu rasvjetu ogleda se u tome što svjetlost ne pada odozgo te stoga manje bliješti.

VRTNA RASVJETA

Uključite rasvjetu u dekoraciju vrta. Lijepa vrtna rasvjeta će istaknuti prirodnu ljepotu vrta i stvoriti ugodnu atmosferu. Vrtna rasvjeta produžuje ljetne noći i vizualno proširuje granice doma tijekom cijele godine. Dobro planiranim postavljanjem LED svjetiljki vrt će noću djelovati sasvim drugačije nego danju. Pravi je odabir da se umjesto cijelog vrta osvijetle samo pojedina područja u njemu.

INFRACRVENI SENZORI POKRETA

Infracrveni senzori pokreta su inovativni senzori osjetljivi i na najmanji pokret i namijenjeni su uključivanju svjetiljki pokretom. Osim pokretom, senzori uključuju i isključuju svjetiljke ovisno o koncentraciji dnevnog svjetla. Doseg infracrvenog senzora pokreta može biti do 12 m. Vremenski period osvjetljavanja, kao i osjetljivost na dnevno svjetlo, moguće je individualno podesiti.
